

SOCIO- POLITICAL SURVEY

APRIL 2024

Republic of Moldova

Research methodology

- ✓ **Sample size:** 1008 persons aged 18 and over;
- ✓ **Sample:** stratified, probabalistic, bistadial;
- ✓ **Survey type:** telephone interview moderated by interviewer (CATI)
- ✓ **Representativeness:** the sample is representative of the adult population of the Republic of Moldova, with a maximum error of $\pm 3,1\%$
- ✓ **Data collection period:** April 6 – April 13, 2024. The questionnaire was available in Romanian and Russian and respondents were given a choice of language.

Following the analysis of the sample structure obtained, it was found that the population distribution known from the available statistical data was consistent with that obtained, within the limits of the admissible statistical deviation. There was a difference in the gender structure, with an over-representation of females, and in the age groups, with an under-representation of young people (18-29 years). The main cause of these deviations is the phenomenon of labour migration abroad.

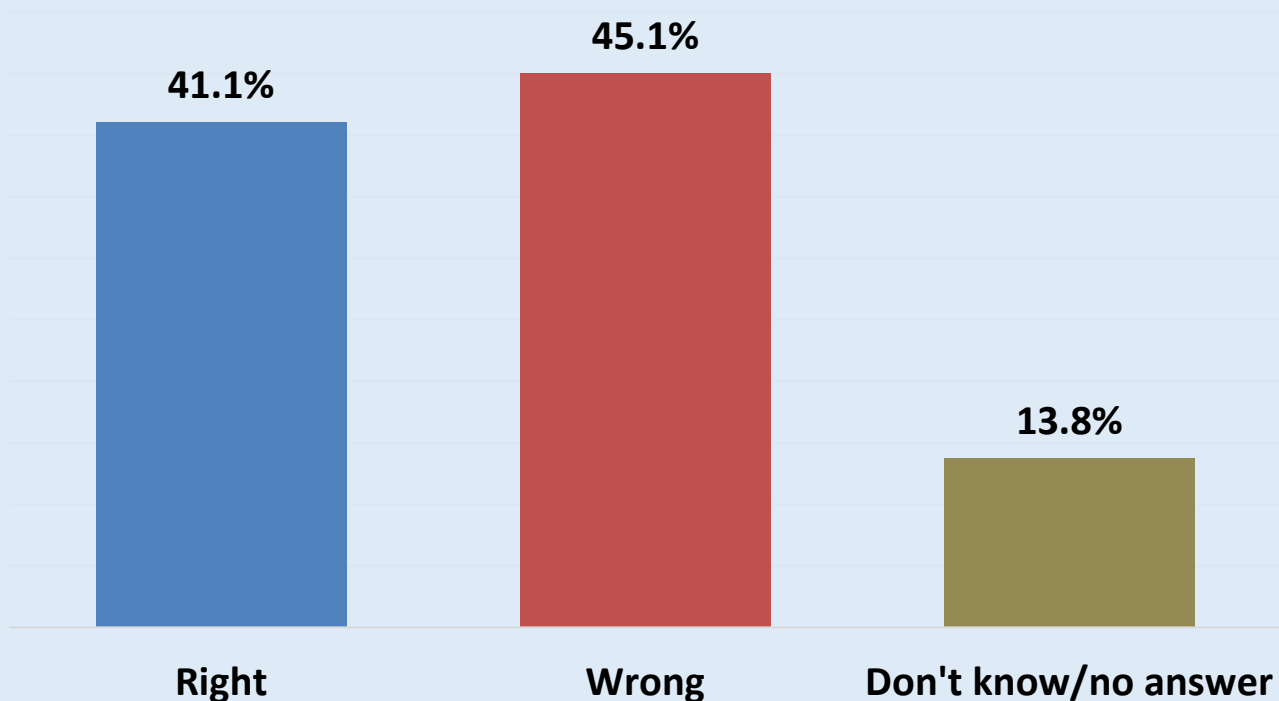

*To correct for this, the results were weighted so that the structure of the sample taken into account represents the average of the distributions recorded in official statistics and that obtained in the field. Thus, **the results presented are weighted**. The difference between weighted and unweighted results does not exceed 1.5% for any of the questions.*

The survey was conducted as part of the project "Maintaining the Resilience of Democratic Institutions in the Moldova", implemented by the "WatchDog.MD Community, supported by the Open Society Foundation. Conclusions do not represent the position of the donor.
